Important Notice

Due to the nature of wireless communications, transmission and reception of data can never be guaranteed. Data may be delayed, corrupted (i.e., have errors) or be totally lost. Although significant delays or losses of data are rare when wireless devices such as the router is used in a normal manner with a well-constructed network, the router should not be used in situations where failure to transmit or receive data could result in damage of any kind to the user or any other party, including but not limited to personal injury, death, or loss of property. Robustel accepts no responsibility for damages of any kind resulting from delays or errors in data transmitted or received using the router, or for failure of the router to transmit or receive such data.

Safety Precautions

General

- The router generates radio frequency (RF) power. When using the router, care must be taken on safety issues related to RF interference as well as regulations of RF equipment.
- Do not use your router in aircraft, hospitals, petrol stations or in places where using cellular products is prohibited.
- Be sure that the router will not be interfering with nearby equipment. For example: pacemakers or medical equipment. The antenna of the router should be away from computers, office equipment, home appliance, etc.
- An external antenna must be connected to the router for proper operation. Only uses approved antenna with the router. Please contact authorized distributor on finding an approved antenna.
- Always keep the antenna with minimum safety distance of 20 cm or more from human body. Do not put the antenna inside metallic box, containers, etc.
- RF exposure statements
 1. For mobile devices without co-location (the transmitting antenna is installed or located more than 20cm away from the body of user and nearby person)
- FCC RF Radiation Exposure Statement
 1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
 2. This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and human body.

Note: *Some airlines may permit the use of cellular phones while the aircraft is on the ground and the door is open. Router may be used at this time.*

Using the router in vehicle

- Check for any regulation or law authorizing the use of cellular devices in vehicle in your country before installing the router.
- The driver or operator of any vehicle should not operate the router while driving.
- Install the router by qualified personnel. Consult your vehicle distributor for any possible interference of electronic parts by the router.
- The router should be connected to the vehicle's supply system by using a fuse-protected terminal in the vehicle's fuse box.
- Be careful when the router is powered by the vehicle's main battery. The battery may be drained after extended period.

Protecting your router

- To ensure error-free usage, please install and operate your router with care. Do remember the following:
- Do not expose the router to extreme conditions such as high humidity/rain, high temperature, direct sunlight, caustic / harsh chemicals, dust, or water.
- Do not try to disassemble or modify the router. There is no user serviceable part inside and the warranty would be void.
- Do not drop, hit or shake the router. Do not use the router under extreme vibrating conditions.
- Do not pull the antenna or power supply cable. Attach/detach by holding the connector.
- Connect the router only according to the instruction manual. Failure to do it will void the warranty.
- In case of problem, please contact authorized distributor.

Regulatory and Type Approval Information

Table 1: Directives

| | | |
|------------|---|---|
| 2011/65/EC | Directive 2011/65/EU of the European Parliament and of the Council of 8 June 2011 on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS) |  |
| 2012/19/EU | Directive 2012/19/EU the European Parliament and of the Council of 4 July 2012 on waste electrical and electronic equipment (WEEE) |  |

Table 2: Standards of the Ministry of Information Industry of the People's Republic of China

| | | |
|-----------------|--|---|
| SJ/T 11363-2006 | "Requirements for Concentration Limits for Certain Hazardous Substances in Electronic Information Products" (2006-06). | |
| SJ/T 11364-2006 | <p>"Marking for Control of Pollution Caused by Electronic Information Products" (2006-06).</p> <p>According to the "Chinese Administration on the Control of Pollution caused by Electronic Information Products" (ACPEIP) the EPUP, i.e., Environmental Protection Use Period, of this product is 20 years as per the symbol shown here, unless otherwise marked. The EPUP is valid only as long as the product is operated within the operating limits described in the Hardware Interface Description.</p> <p>Please see Table 3 for an overview of toxic or hazardous substances or elements that might be contained in product parts in concentrations above the limits defined by SJ/T 11363-2006.</p> |  |

Table 3: Toxic or hazardous substances or elements with defined concentration limits

| Name of the part | Hazardous substances | | | | | |
|---|----------------------|------|------|------------|-------|--------|
| | (Pb) | (Hg) | (Cd) | (Cr (VI)) | (PBB) | (PBDE) |

Chapter 1 Product Concept

1.1 Overview

Robustel GoRugged R3000 Lite is a rugged cellular router offering state-of-the-art mobile connectivity for machine to machine (M2M) applications.

- Dual SIM redundancy for continuous cellular connections; supports 2G/3G/4G
- VPN tunnel: IPSec/OpenVPN/PPTP/L2TP/GRE/DMVPN
- Supports GRE over IPSec/L2TP over IPSec
- Supports 802.1Q VLAN Trunk
- Supports PPPoE Bridge
- Supports Modbus gateway (Modbus RTU/ASCII to Modbus TCP) and Modbus Master
- Auto reboot via SMS/Incoming call/Timing
- Supports alarm via Email, SMS, SNMP trap
- Supports AAA and FTP
- Supports RobustLink (centralized M2M management platform, to remote monitor, configure and update firmware)
- Supports RobustVPN (Cloud VPN Portal, to provide easy and secure remote access for PLCs and machines)
- Flexible management methods: Web/CLI/SNMP/RobustLink
- Firmware upgrade via Web/CLI/USB/SMS/RobustLink
- Wide range input voltages from 6 to 26 VDC and extreme operating temperature

1.2 Packing List

Check your package to make sure it contains the following items:

- Robustel GoRugged R3000 Lite router x 1

OR

Two antennas

One antenna

- 3-pin pluggable terminal block with lock for power connector x 1

- *Quick Start Guide* with download link of other documents or tools x 1

Note: *If any of the above items is missing or damaged, please contact your Robustel Sales Representative.*

Optional accessories (can be purchased separately):

- SMA antenna x 1 (stubby antenna or magnet antenna optional)

The number of SMA antenna depend on the model of R3000 Lite, more details please refer to **1.3 Specifications** section.

Stubby antenna

Magnet antenna

- Ethernet cable x 1

- Wall mounting kit x 2

- 35 mm DIN rail mounting kit x 1

- AC/DC power supply adapter x 1 (12 VDC, 1.5 A; EU, US, UK, AU plug optional)

- DB9 male to terminal block for serial port
The detail about the PIN assignment is showed in the **2.2 PIN assignment** section.

1.3 Specifications

Cellular Interface

- Standards: GSM/GPRS/EDGE/UMTS/TD-SCDMA/EVDO/HSPA+/LTE
- GSM: max. 9.6/2.7 Kbps (DL/UL)
- GPRS: max. 86 Kbps (DL & UL), class 10
- EDGE: max. 236.8 Kbps (DL & UL), class 12
- UMTS: max. 384 Kbps (DL & UL)
- TD-SCDMA: max. 2.8 Mbps/384 Kbps (DL/UL)
- EVDO: max. 14.7/5.4 Mbps (DL/UL)
- HSPA+: max. 21.6/5.76 Mbps (DL/UL)
- FDD LTE: max. 100/50 Mbps (DL/UL)
- TDD LTE: max. 100/50 Mbps (DL/UL)
- SIM: 2 x (3 V & 1.8 V)
- Antenna interface: SMA female

| Cellular interface | The number of antenna interface |
|--------------------|---------------------------------|
| 3G HSDPA | 1 |
| 3G HSPA+ | 2 |
| 4G LTE | 2 |

Ethernet Interface

- Number of ports: 1 x 10/100 Mbps
- Magnet isolation protection: 1.5 KV

Serial Interface

- Number of ports: 1 x RS232 and 1 x RS485
- ESD protection: ± 15 KV
- Parameters: 8E1, 8O1, 8N1, 8N2, 7E2, 7O2, 7N2, 7E1
- Baud rate: 300 bps to 230400 bps
- RS232: TxD, RxD, RTS, CTS, GND
- RS485: Data+ (A), Data- (B)
- Interface: DB9 female

System

- LED indicators: RUN, PPP, USR, 3 x RSSI
- Built-in RTC, Watchdog, Timer
- Expansion: 1 x USB 2.0 host up to 480 Mbps

Software

- Network protocols: PPP, PPPoE, TCP, UDP, DHCP, ICMP, NAT, DMZ, RIP v1/v2, OSPF, DDNS, VRRP, HTTP, HTTPS, DNS, ARP, QoS, SNTP, Telnet, IP Passthrough, etc.
- VPN tunnel: IPSec/OpenVPN/PPTP/L2TP/GRE
- Firewall: SPI, anti-DoS, Filter, Access Control

- Management: Web, CLI, SNMP v1/v2/v3, SMS, RobustLink
- Serial port: TCP client/server, UDP, Modbus RTU/ASCII to Modbus TCP, Virtual COM (COM port redirector)
- RobustLink: Centralized M2M management platform
- RobustVPN: Cloud VPN Portal

Power Supply and Consumption

- Power supply interface: 3.5 mm terminal block
- Input voltage: 6 to 26 VDC
- Power consumption: Idle: 100 mA @ 12 V
Data link: 400 mA (peak) @ 12 V

Physical Characteristics

- Housing & Weight: Metal, 300 g
- Dimension (L x W x H): 105 mm x 98 mm x 29.5 mm
- Installation: 35 mm DIN rail or wall mounting or desktop

Regulatory and Type Approvals

- Approvals & Certificates: CE, R&TTE, RCM, RoHS, WEEE
- EMC:
 - EMI: EN 55022: 2006/A1: 2007 (CE&RE) Class B
 - EMS: IEC 61000-4-2 (ESD) Level 3, IEC 61000-4-3 (RS) Level 4
IEC 61000-4-4 (EFT) Level 3, IEC 61000-4-5 (Surge) Level 3
IEC 61000-4-6 (CS) Level 3, IEC 61000-4-8 (M/S) Level 4

1.4 Dimensions

1.5 Selection and Ordering Data

| Model No. | Description | Frequency Range Selection | Operating Environment |
|-----------|--------------|--|------------------------------|
| R3000-L3H | HSDPA router | UMTS/HSDPA/HSUPA/HSPA+: 800/850/900/1900/2100 MHz GSM/GPRS/EDGE: 850/900/1800/1900 MHz | -40 to 85 °C /5 to 95% RH |
| R3000-L3P | HSPA+ router | HSDPA/HSUPA/HSPA+: 800/850/900/AWS/1900/2100 MHz GSM/GPRS/EDGE: 850/900/1800/1900 MHz | -40 to 85 °C /5 to 95% RH |
| R3000-L3E | EVDO router | CDMA450 1xEV-DO Rev-B CDMA450 1xRTT | -25 to 75 °C /5 to 95% RH |
| R3000-L4L | LTE router | FDD LTE: B1, 2, 3, 4, 5, 7, 8, 18, 19, 20, 21, 28, 31 TDD LTE: B38, 39, 40, 41 UMTS/HSDPA/HSUPA/HSPA+: B1, 2, 5, 6, 8, 9, 19 DC-HSPA+/ WCDMA: B1, B2, B5, B8 TD-SCDMA: B34, 39 GSM/GPRS/EDGE: 850/900/1800/1900 MHz | -30 to 75 °C /5 to 95% RH |

Chapter 2 Installation

2.1 LED Indicators

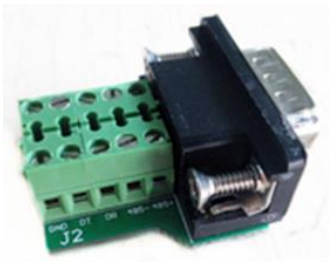

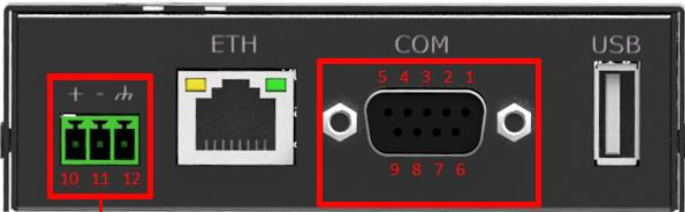

| Name | Color | Status | Description |
|------|-------|--------------|-------------------------------------|
| RUN | Green | On, blinking | Router is ready |
| | | On, solid | Router is booting |
| | | Off | Router is powered off |
| USR | Green | On, blinking | VPN tunnel/PPPoE/DynDNS/GPS is up |
| | | Off | VPN tunnel/PPPoE/DynDNS/GPS is down |
| PPP | Green | On, blinking | There is dataflow |
| | | On, solid | PPP connection is enabled |
| | | Off | PPP connection is disabled |

| RSSI LEDs | Description |
|--|---|
| None | No signal or no SIM card inserted correctly |
| 1 bar (only the first LED is on) | Signal level: 1-10 (Abnormal signal level) |
| 2 bars (the first and the second LED are on) | Signal level: 11-20 (Average signal level) |
| 3 bars (all the RSSI LEDs are on) | Signal level: 21-31 (Optimum signal level) |

Note: Please go to **3.41 Configuration > USR LED** for more details.

2.2 PIN Assignment

Terminal block

| PIN | Power |
|-----|----------|
| 10 | Positive |
| 11 | Negative |
| 12 | GND |

| PIN | Debug | RS232 | RS485 (2-wire) | Terminal block | Direction |
|-----|-------|-------|----------------|----------------|---------------------|
| 1 | CR | | Data+ (A) | 485+ | - |
| 2 | CT | RXD | | RXD | R3000 Lite → Device |
| 3 | | TXD | | TXD | Device → R3000 Lite |
| 4 | DRXD | | | DT | Device → R3000 Lite |
| 5 | GND | GND | | GND x2 | - |
| 6 | | | Data- (B) | 485- | - |
| 7 | | RTS | | RTS | Device → R3000 Lite |
| 8 | | CTS | | CTS | R3000 Lite → Device |
| 9 | DTXD | | | DR | R3000 Lite → Device |

2.3 USB Interface

USB interface is used for batch firmware upgrade, cannot used to send or receive data from slave devices which with USB interface. Users can insert a USB storage device, such as U disk or hard disk, into the router’s USB interface, if there is configuration file or firmware of R3000 Lite inside the USB storage devices, R3000 Lite will automatically update the configuration file or firmware. For more details, please go to **3.14 Configuration > USB**.

2.4 Reset Button

| Function | Operation |
|-------------------------------------|---|
| Reboot | Press the button for at least 5 seconds in operating status |
| Restore to factory default settings | After powering up the router, press the RST button by a small non-conductive stick with a blunt end in about 60 seconds until all three LEDs (RUN, PPP, USR) on the left side blinking 5 times simultaneously. Then the router will be restored to factory default settings |

2.5 Ethernet Port

The Ethernet port has two LED indicators. The yellow one is **Link Indicator** and the green one is **Speed Indicator**. Each indicator has three status, for details see the table below:

| Indicator | Status | Description |
|-----------------|--------------|---------------------------|
| Link Indicator | On | Connection is enabled |
| | On, blinking | Data is being transmitted |
| | Off | Connection is disabled |
| Speed Indicator | On | 100 Mbps mode |
| | Off | 10 Mbps mode |

2.6 Mount the Router

R3000 Lite router supports for horizontal surface placement, DIN rail mounting and wall mounting.

- **Two ways for mounting the router**

1. **Wall mounting**

Use 3 pcs of M3*4 countersunk Phillips screws to fix the router on the wall mounting kit, and then use 2 pcs of M3 drywall screws to mount the router associated with the wall mounting kit on the wall.

Note: Recommended torque for mounting is 1.0 N.m, and the maximum allowed is 1.2 N.m.

2. **DIN rail mounting**

Use 3 pcs of M3*4 countersunk phillips screws to fix the router on the DIN rail, and then hang the DIN rail on the bracket. It is necessary to choose the standard bracket.

Note: Recommended torque for mounting is 1.0 N.m, and the maximum allowed is 1.2 N.m.

2.7 Install the SIM Card

- **Remove slot cover**

1. Make sure router is powered off.
2. To remove cover, loosen the screws associated with the cover by using a screwdriver and then find the SIM card slot.

- **Insert SIM card**

3. To insert SIM card, press the card with fingers until snap on and then tighten the screws associated with the cover by using a screwdriver.

- **Remove SIM card**

4. Make sure router is powered off.
5. To remove SIM card, press the card with fingers until pop out and then take out the SIM card.

Note:

1. Use the specific M2M SIM card when the device is working in extreme temperature, because the regular SIM card for long-time working in harsh environment will be disconnected frequently.
2. Do not forget to twist the cover tightly to avoid being stolen.
3. Do not touch the metal of the SIM card surface in case information in the card will lost or be destroyed.
4. Do not bend or scratch the SIM card.
5. Keep the SIM card away from electricity and magnetism.
6. Make sure router is powered off before inserting or removing the SIM card.

2.8 Connect the External Antenna (SMA Type)

Connect the SMA external antenna connector to the router's antenna interface and twist tightly. Make sure the antenna is within the correct frequency range provided by the operator and with 50 Ohm impedance.

Note: Recommended torque for mounting is 0.35 N.m.

2.9 Grounding the Router

Router grounding helps prevent the noise effect due to electromagnetic interference (EMI). Connect the router to the site ground wire by the ground screw before powering on.

Note: This product is appropriate to be mounted on a sound grounded device surface, such as a metal panel.

2.10 Connect the Router to PC

Connect the router's Ethernet port to a PC through a standard crossed network cable.

2.11 Power Supply

CONNECTING THE POWER CABLE

| COLOR | POLARITY |
|--------|----------|
| RED | + |
| YELLOW | - |

R3000 Lite router supports reverse polarity protection, but always refers to the figure above to connect the power adapter correctly. There are two cables associated with the power adapter. Following to the color of the head, connect the cable marked red to the positive pole through a terminal block, and connect the yellow one to the negative in the same way.

Note: The range of power voltage is 6 to 26 VDC.

Chapter 3 Configuration Settings over Web Browser

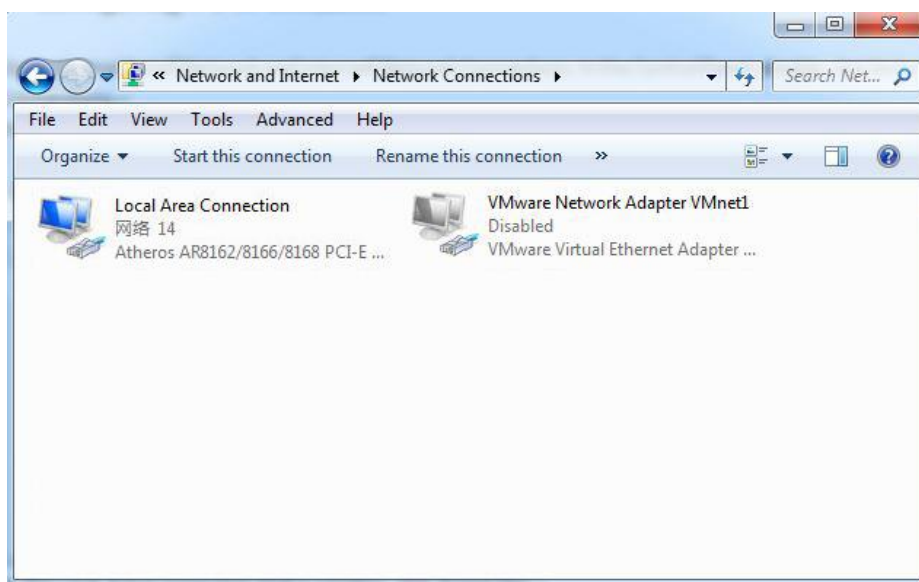

The router can be configured through web browser including IE 8.0 or above, Chrome and Firefox, etc. And the supported operating systems are: Linux, Mac OS, Windows 98/NT/2000/XP/Me/Vista/7/8, etc. There are various ways to connect to the router, either through an external repeater/hub or to PC directly. When the router connects to the PC's Ethernet port directly, and if the router works as the DHCP server, then the PC can obtain IP from router directly; or the PC can be configured with a static IP address in the same network segment with the router, and then the PC and the router will form a small local area network. After the connection has been established successfully, enter the device's default login address in the browser and access the router's web login interface.

3.1 Configuring for the PC

There are two methods to configure the IP address on PC, one is to obtain an IP address automatically from Local Area Connection, and another is to configure a static IP address manually within the same subnet of R3000 Lite router. Please refer to the steps below:

Window 7 System (the configuration for Windows system is similar)

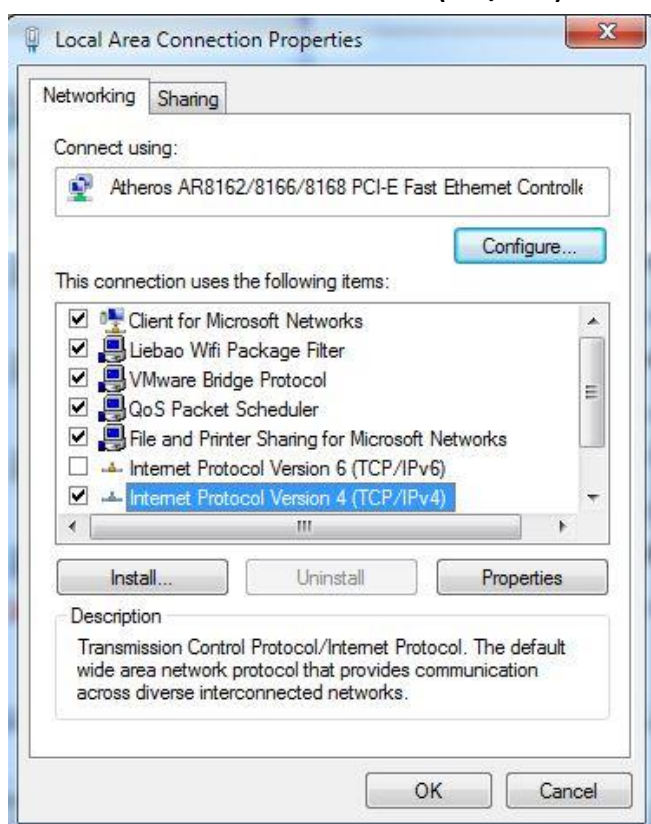

1. Click **Start > Control panel** (in classic view), double-click **Network and Sharing Center**, and then double-click **Local Area Connection**.

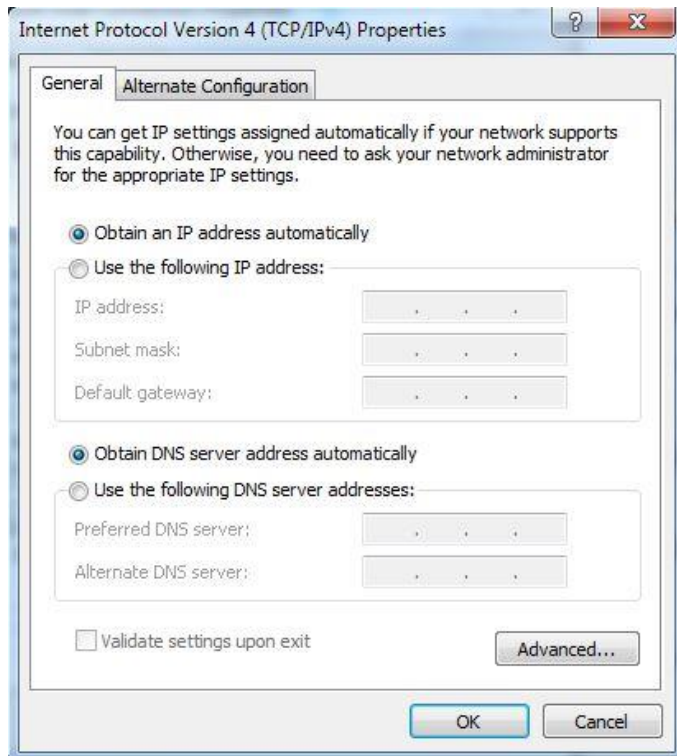

2. Click **Properties** in the window of **Local Area Connection Status**.

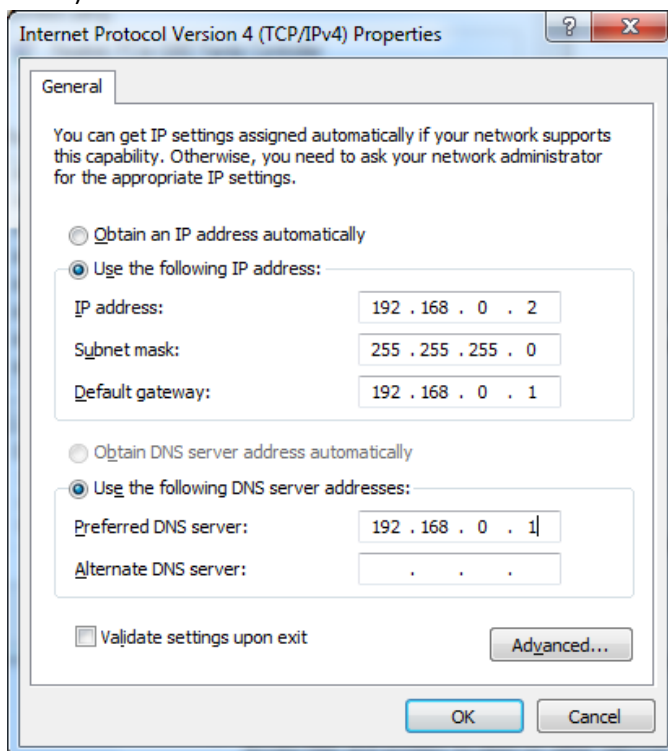

3. Choose **Internet Protocol Version 4 (TCP/IPv4)** and click **Properties**.

4. Two ways for configuring the IP address of PC:

Obtain an IP address automatically:

Use the following IP address (configured a static IP address manually within the same subnet of R3000 Lite router):

5. Click **OK** to finish the configuration.

3.2 Logging in the Router

Before configuring your router, you need to know the following default settings.

| Item | Description |
|-------------|-------------------------------------|
| Username | admin |
| Password | admin |
| Ethernet | 192.168.0.1/255.255.255.0, LAN mode |
| DHCP Server | Enabled. |

Access the router's web interface

1. On the PC, open a web browser such as Internet Explorer, Google and Firefox etc.
2. From your web browser, enter the IP address of the router. The default IP address of R3000 Lite is 192.168.0.1, though the actual address may vary.

Note: If a public SIM card is inserted in the R3000 Lite router, you can enter the corresponding public IP address of the SIM card in the browser's address bar, so that to access the R3000 Lite router wirelessly by this public IP.

3. In the login page, enter the username and password of R3000 Lite router, choose language and then click **Login**.

User authentication required. Login please.

| Status | There are the possible statuses of cellular SIM card. "Inserted", "Ready", "Need SIM PIN", "Need SIM PUK", "Check SIM error", "Input PIN Code error", "Input PUK Code error", "Poor signal", "Registration fails", "initializing APN fails", "Linkup fails"; "Not inserted" | / |
| Network Provider Type | Select from "Auto", "Custom" or the ISP name, you may click Configuration > Cellular WAN > ISP Profile . Auto: Router will get the ISP information from SIM card, and set the APN, username and password automatically. This option only works when the SIM card is from well-known ISP. Custom: Users need to set the APN, username and password manually. | Auto |
| APN | Access Point Name for cellular dial-up connection, provided by local ISP. | Null |
| Username | User Name for cellular dial-up connection, provided by local ISP. | Null |
| Password | Password for cellular dial-up connection, provided by local ISP. | Null |
| Dialup No. | Dialup number for cellular dial-up connection, provided by local ISP. | *99***1# |
| PIN Type | Select from "None", "Input", "Lock", "Unlock". None: Select when SIM card does not enable PIN lock or PUK lock. Input: Select when SIM card has enabled with PIN lock or PUK lock. Correct PIN/PUK code need to be entered. Lock: Select when user needs to lock the SIM card with PIN or PUK code. Unlock: Select when user needs to unlock the SIM card with PIN or PUK code. Note: Please ask your local GSM ISP to see whether your SIM card requiring PIN or not. If you want to change with a new PIN code, you need to input new PIN code in item "New PIN Code" and "Confirm New PIN Code". You can go to tab Status > Event/Log > AT+CPIN? to check what the status of the SIM card is. | None |
| PPPoE Bridge Setting | | |
| Enable PPPoE Bridge | Click to enable PPPoE Bridge setting. | Disable |
| Connection Mode | | |
| Connection Mode | Select from "Always Online" and "Connect On Demand". Always Online: Auto activates PPP and keeps the link up after power on. | Connect On Demand |

| | | |
|---------------------------------|--|---------|
| | <p>Connect On Demand: After selection this option, user could configure Triggered by Serial Data, Triggered by Periodically Connect and Triggered by Time Schedule.</p> <p>Note: If you select several connect on demand polices, router only have to meet one of them to be triggered.</p> | |
| Redial Interval (s) | Router will automatically re-dial with this interval when it fails communicating to peer via TCP or UDP. | 30 |
| Max Retries | The maximum retries times for automatically re-connect when router fails to dial up. After maximum retries, router will reboot the wireless module. If router still cannot dial up successfully, it will try to switch to the other SIM card. Then router will re-connect with the other SIM card with maximum retries. After successful connection, the Max Retries counter will be set to 0. | 3 |
| ICMP Detection Primary Server | Router will ping this primary address/domain name to check that if the current connectivity is active. | 8.8.8.8 |
| ICMP Detection Secondary Server | Router will ping this secondary address/domain name to check that if the current connectivity is active. | 8.8.4.4 |
| ICMP Detection Interval (s) | Set the ping interval time. | Null |
| ICMP Detection Timeout (s) | Set the ping timeout. | 30 |
| ICMP Detection Retries | If Router ping the preset address/domain name time out continuously for Max Retries time, it will consider that the connection has been lost. | 3 |
| Reset The Interface | Enable to reset the cellular/ETH interface after the max ICMP detection retries. | 3 |
| Inactivity Time (s) | Set the auto disconnect time when no data flow produced. | 0 |
| Serial Output Content (Hex) | The content which output to the serial device which connect to router and inform it that router is ready to receive serial data. | Null |
| Triggered by Serial Data | Tick this check box to allow router automatically connects to cellular network from idle mode when there is data comes out from serial port. | Enable |
| Triggered by Tel | Tick this check box to allow router automatically connects to cellular network from idle mode when make a voice call to router. | Disable |
| Triggered by SMS | Tick this check box to allow router automatically connects to cellular network from idle mode when send a specific SMS to router. | Disable |
| SMS Connect Command | Users shall send this specific SMS to trigger router to connect to cellular network. | Null |
| SMS Disconnect Command | Users shall send this specific SMS to trigger router to disconnect to cellular network. | Null |
| SMS Connect Reply | When router connects to cellular network, it will automatically send out this SMS to specific users (set in the Phone Group). | Null |
| SMS Disconnect Reply | When router disconnect from cellular network, it will automatically send out this SMS to specific users (set in the Phone Group). | Null |
| Phone Group | Click to add Phone Group to Set specific users' phone Book and which | Null |

| | | |
|---|---|-------------------------|
| | phone Group they are belonged to. | |
| Periodically Connect | Tick this check box to allow router automatically connects to cellular network with preset interval which you preset in <i>Periodically Connect Interval</i> . | Enable |
| Periodically Connect Interval (s) | Periodically Connect Interval for Periodically Connect. | 300 |
| Time Schedule | Select the Time Range to allow router automatically connects to cellular network during this time range. | Null |
| Time Range | Adding the Time Range for Time Schedule. You can set the days of one week and at most three ranges of time of one day. | Null |
| Dual SIM Policy | | |
| Main SIM Card | Set the preferred SIM card from SIM 1, SIM 2 or Auto. | SIM1 |
| Switch to backup SIM card when connection fails | Router will switch to another SIM card if main SIM card fail to connect to network. | Disable |
| Switch to backup SIM card when ICMP detection fails | If the packet loss rate of ICMP's pings or average duration of each ping exceeds the set value, the router will switch to the backup card. There are two critical condition, packet loss rate and average duration of each ping. | Disable |
| Total Ping (5~100) | Set the total number of pings; fetch value from 5 to 100. | 10 |
| Average Ping (100~5000ms) | Set the duration of average ping; fetch value from 100 to 5000ms. | 400 |
| Total Loss (0~100%) | Set the total packet loss rate. | 30 |
| Switch to backup SIM card when roaming is detected | Router will switch to backup SIM card when preferred SIM card is roaming. | Disable |
| Preferred PLMN | The identifier for Router to check if it is in home location area or in roaming area, and decide if it needs to switch back to preferred SIM card. | Null |
| Switch to backup SIM card when data limit is exceeded | If the SIM card that the router worked with currently has reached the data traffic limitation you preset, it will switch to the other SIM card. | Disable |
| When both data limit is exceeded | "Stay in Backup SIM Card", "Switch Back Main SIM Card" or "Disable Cellular Until Data Is Cleared" is optional. | Stay in Backup SIM Card |
| Clean Data Mode | "Time of Day", "Day of Week" or "Day of Month" is optional. Time of Day: the format is hh:mm; specify one point-in-time of every day to zero out the data flow. Day of Week: select from Sunday to Saturday; specify one day of every week to zero out the data flow. Day of Month: select from 1 to 31; specify one day of every month to zero out the data flow. | Day of Month |
| Max Data limitation | Set the monthly data traffic limitation. | 100 |

| | | |
|---|--|---------|
| (MB) | | |
| Already used (KB) | This tab will show how many data traffic has been used. | 0 |
| Switch back main SIM card after timeout | Enable to Switch back Main SIM card after the Initial timeout. | Disable |
| Initial Timeout(min) | Set the initial timeout. | 60 |
| Roaming Network Setting | | |
| Roaming Network Selection | Tick to enable the roaming network setting; then the router will automatically search for and connect to the roaming network with good signal. | Disable |
| Signal Threshold | The network will be switched when the signal value of current network is less than the set signal value. The order of switching network will switch according to the queried PLMN list of R3000 Lite. | 0 |
| Preferred PLMN | PLMN list will generally have an optimal PLMN. The specific network will be selected automatically by the module if the optimal PLMN is null; otherwise, the R3000 Lite will choose the corresponding network of the optimal PLMN. | Null |
| PLMN Status List | If the current SIM card supports multiple networks, R3000 Lite will query all network info of this card supported. This information will be displayed in the PLMN list, click the Refresh button to refresh the current SIM card information. | Null |
| Network Address Translation | | |
| Enable Nat Function | Tick to enable the SNAT function | Enable |

Advanced @Cellular WAN

| Item | Description | Default |
|----------------|--|---------|
| Phone No. | Set the SIM card's phone number, and it will be showed in Status > System > System > Cellular WAN Information > SIM Phone Number . In general, you don't need to set this number because router will read it from the SIM card automatically. | Null |
| Network Type | Select from "Auto", "2G GSM" and "3G UMTS" as the SIM card supported. | Auto |
| Band Mode | Tick the Band Mode options to fix the bands router working with. | Disable |
| Authentication | Select from "Auto", "PAP" and "CHAP" as the local ISP required. | Auto |
| MTU | Maximum Transmission Unit. It is the identifier of the maximum size of packet, which is possible to transfer in a given environment. | 1500 |
| MRU | Maximum Receiving Unit. It is the identifier of the maximum size of packet, which is possible to receive in a given environment. | 1500 |

| | | |
|-----------------------------|---|--------------------|
| Asyncmap Value | One of the PPP initialization strings. In general, you don't need to modify this value. | 1 |
| Use Peer DNS | Enable to obtain the DNS server's address from the ISP. | Enable |
| Primary DNS Server | Set the primary DNS server's address. This item will be unavailable if you enable "Use Peer DNS". | Null |
| Secondary DNS Server | Set the secondary DNS server's address. This item will be unavailable if you enable "Use Peer DNS". | Null |
| Address/Control Compression | Used for PPP initialization. In general, you need to enable it as default. | Enable |
| Protocol Field Compression | Used for PPP initialization. In general, you need to enable it as default. | Enable |
| Expert Options | You can enter some other PPP initialization strings in this field. Each string can be separated by a space. | noccp nobsdcomp |

ISP Profile

This section allows users to preset some ISP profiles which will be shown in the selection list of **Configuration > Cellular WAN > Network Provider Type**.

Basic

Advanced

ISP Profile

ISP Profile List

| ISP | APN | Username | Password | Dialup No. |
|--------------|-------|----------|----------|------------|

| Parity | Select from “None”, “Odd” and “Even”. | None |
| Stop bit | Select from “1” and “2”. | 1 |
| Flow control | Select from “None”, “Software” and “Hardware”. | None |
| Protocol | Select from “None”, “Transparent”, “Modbus gateway”, “Transparent Over Rlink”, “Modbus Over Rlink” “AT Over COM” and “GPS Report”. <ol style="list-style-type: none"> 1. None: Router does nothing to RS232 serial port. 2. Transparent: Router will transmit the serial data transparently without any protocols. 3. Modbus gateway: Router will translate the Modbus RTU data to Modbus TCP data and vice versa. 4. Transparent Over Rlink: Router will send all data from RS232 serial port to Robustlink, then Robustlink will forward the data to another destination site. 5. Modbus Over Rlink: Router will translate all data from RS232 serial port to | None |

| | | |
|--|--|------------|
| | <p>Modbus TCP protocol data, and then send to Robustlink, after that Robustlink will forward the data to another destination site.</p> <p>6. AT Over COM: select to operate router via RS232 COM port. For example, enter AT commands to router via RS232 COM port.</p> <p>7. GPS Report: select to enable router to output GPS status data through RS232 port.</p> | |
| Mode @Transparent | <p>Select from "TCP Server", "TCP Client" and "UDP".</p> <p>TCP Client: Router works as TCP client, initiate TCP connection to TCP server. Server address supports both IP and domain name.</p> <p>TCP Server: Router works as TCP server, listening for connection request from TCP client.</p> <p>UDP: Router works as UDP client.</p> | TCP Client |
| Local Port @Transparent | Enter the Local port for TCP or UDP. | 0 |
| Multiple Server @Transparent | <p>Click "Add" button to add multiple server. You need to enter the server's IP and port, and enable or disable "Send data to serial". If you disable "Send data to serial", router will not transmit the data from this server to serial port.</p> <p>Note: This section will not be displayed if you select "TCP server" in "Mode".</p> | None |
| show Protocol Advanced @ Transparent | Tick to enable protocol advanced setting. | Disable |
| Local IP @ Transparent | <p>This item will show up when you enable any VPN tunnel of R3000 Lite, it means serial data can be matched to this local IP address and be transmitted or received via VPN tunnel.</p> <p>Note: when you do not enable any VPN tunnel, this item will not show up.</p> | Null |
| Interval Timeout @Transparent | <p>The serial port will queue the data in the buffer and send the data to the Cellular WAN/Ethernet WAN when it reaches the Interval Timeout in the field.</p> <p>Note: Data will also be sent as specified by the packet length or delimiter settings even when data is not reaching the interval timeout in the field.</p> | 10 |
| Packet Length @Transparent | <p>The Packet length setting refers to the maximum amount of data that is allowed to accumulate in the serial port buffer before sending. 0 for packet length, no maximum amount is specified and data in the buffer will be sent as specified by the interval timeout or delimiter settings or when the buffer is full. When a packet length between 1 and 1024 bytes is specified, data in the buffer will be sent as soon it reaches the specified length.</p> <p>Note: Data will also be sent as specified by the interval timeout or delimiter settings even when data is not reaching the preset packet length.</p> | 1360 |
| Enable Delimiter1/2 | When Delimiter 1 is enabled, the serial port will queue the data in the buffer and send the data to the Cellular WAN/Ethernet WAN when a specific character, entered in hex format, is received. A second delimiter character may be enabled and specified in the Delimiter 2 field, so that both characters act as the delimiter to control when data should be sent. | Disable |
| Delimiter1/2 (Hex) | Enter the delimiter in Hex. | 0 |

| | | |
|---|---|------------------|
| @Transparent | | |
| Delimiter Process @Transparent | <p>The Delimiter process field determines how the data is handled when a delimiter is received.</p> <p>None: Data in the buffer will be transmitted when the delimiter is received; the data also includes the delimiter characters.</p> <p>Strip: Data in the buffer is first stripped of the delimiter before being transmitted.</p> | Strip |
| Local IP @ Modbus gateway | <p>This item will show up When you enable any VPN tunnel of R3000 Lite, it means serial data can be matched to this local IP address and be transmitted or received via VPN tunnel.</p> <p>Note: when you do not enable any VPN tunnel, this item will not show up.</p> | 0 |
| Local Port @ Modbus gateway | Enter the Local port for Modbus. | 0 |
| Attached serial device type @Modbus gateway | <p>Select From “Modbus RTU slave”, “Modbus ASC II slave”, “Modbus RTU master” and “Modbus ASC II master”.</p> <p>Modbus RTU slave: router connects to Modbus slave device which works under Modbus RTU protocol.</p> <p>Modbus ASC II slave: router connects to Modbus slave device which works under Modbus ASC II protocol.</p> <p>Note: When select “Modbus RTU slave” and “Modbus ASC II slave” protocol, router is as TCP Server site, user need to enter a local port number in “Local Port @Modbus” and wait to be connected.</p> <p>Modbus RTU master: router connects to master device which works under Modbus RTU protocol.</p> <p>Modbus ASC II master: router connects to master device which works under Modbus ASC II protocol.</p> <p>Note: When select “Modbus RTU master” and “Modbus ASC II master” protocol, router is as TCP Client site, user need to enter slave address and slave port number in “Slave Address @ Modbus Slave ” and “Slave Port @ Modbus Slave”, and connect to Server site.</p> | Modbus RTU slave |
| Modbus Slave @Modbus gateway | Add the Modbus slaves which will be polled by Modbus master (router). This section only displayed when you select “Modbus RTU master” or “Modbus ASC II master” in “Attached serial device type”. | Null |
| Slave Address @ Modbus Slave | This connection is usually used to connect to the Modbus slave devices which as TCP server. Enter IP address of the TCP server. | Null |
| Slave Port @ Modbus Slave | Enter the port number of TCP server. | Null |
| ID @ Modbus Slave | Enter the ID number of TCP server. | Null |
| Interval Timeout @ Transparent Over Rlink | The serial port will queue the data in the buffer and send the data to the Cellular WAN/Ethernet WAN when it reaches the Interval Timeout in the field. | 10 |
| Attached serial device type @ | <p>Select From “Modbus RTU slave”, “Modbus ASC II slave”.</p> <p>Modbus RTU slave: router connects to slave device which works under Modbus</p> | Null |

| | | |
|-------------------------------|---|--------------|
| Modbus Over Rlink | RTU protocol. Modbus ASC II slave: router connects to slave device which works under Modbus ASC II protocol. | |
| Display all com @ AT Over COM | Enable to display all virtual com of the module inside the router. Generally, router will occupy /dev/ttyUSB0 and /dev/ttyUSB2 for dialing up to GPRS. Note: Enable this function will disable Cellular WAN function. | Disable |
| COM Name | Show the virtual com name of the module inside. | /dev/ttyUSB1 |

|-------------|-----|
| Add | |

Blocking By Keyword

| Description | Keyword |
|-------------|---------|
| Add | |

| Filtering @ Firewall | | |
|-------------------------|--|---------|
| Item | Description | Default |
| Default Filter Policy | Select from "Accept" and "Drop". Accept: Router will accept all the data traffic except the hosts which were added in the drop list. Drop: Router will drop all the data traffic except the hosts which were added in the accept list. | Accept |
| Add Filter List | Click "Add" to add a filter list. | Null |
| Action | Select from "Accept" and "Drop". Accept: Router will reject all the connecting requests except the hosts which fit this filter rule. Drop: Router will only accept the connecting requests from the hosts which fit this filter rule. | Accept |
| Source IP | Defines if access is allowed from one or a range of IP addresses which are defined by Source IP Address, or every IP addresses. | Null |
| Source Port | Defines if access is allowed from one or a range of port which is defined by Source Port. | Null |
| Target IP Address | Defines if access is allowed to one or a range of IP addresses which are defined by Target IP Address, or every IP addresses. | Null |
| Target Port | Defines if access is allowed to one or a range of port which is defined by Target Port. | Null |
| Protocol | Select from "TCP", "UDP", "TCP&UDP", "ICMP" or "ALL". If you don't know what kinds of protocol of your application, we recommend you select "ALL". | TCP |
| Blocking By URL Address | Click "Add" to add a URL list. | Null |

| | | |
|------------------------------|---|------|
| URL@ Blocking By URL Address | Block the access according to the URL Address that filled in the blank. | Null |
| Blocking By Keywork | Click “Add” to add a Keywork list. | Null |
| Keyword@ Blocking By Keywork | Block the access according to the Keyword that filled in the blank. | Null |

Note: You can use “-” to define a range of IP addresses or ports, e.g.1.1.1.1-2.2.2.2, 10000-12000.

The filtering settings should be divided into two parts. Part 1 is the Exact Filter List and Part 2 is the Default Filter Policy. The priority of Exact Filter List is higher than Default Filter Policy. It means that while Router receive IP packets from WAN side, it will check the Exact Filter List first, if the IP packets mismatch the Exact Filter List, then Router will execute the Default Filter Policy.

| Mac-IP Bounding | The defined host (MAC) on the LAN side only can use the defined IP address to communicate with router, or will be rejected. | Null |
| Mac Address | Enter the defined host's Mac Address. | Null |
| IP Address | Enter the defined host's IP Address. | Null |

3.17 Configuration > QoS

This section allows users to set the QoS parameters.

QoS

Enable Quality Of Service(QoS)

☒ Enable QoS

Quality of Service(QoS) Basic Setting

| | | | | |
|--------------------------------------|---------------------------------|------------------------------|------------------------------|------------------------------|
| Downlink Speed (kbps): | <input type="text" value="0"/> | | | |
| Uplink Speed (kbps): | <input type="text" value="0"/> | | | |
| Optimize for TCP Flags: | <input type="checkbox"/> SYN | <input type="checkbox"/> ACK | <input type="checkbox"/> FIN | <input type="checkbox"/> RST |
| Optimize for ICMP: | <input type="checkbox"/> | | | |
| Optimize for Serial Data Forwarding: | <input type="checkbox"/> | | | |
| Priority Percent Definition: | | | | |
| Exempt: | <input type="text" value="50"/> | | | |
| Premium: | <input type="text" value="25"/> | | | |

| | |
|-------------------|-------------------------------------|
| Express: | <input type="text" value="15"/> |
| Normal: | <input type="text" value="10"/> |
| Bulk: | <input type="text" value="1"/> |
| Default Priority: | <input type="text" value="Normal"/> |

QoS Service Control List

| | | | |
|------------------------------------|----------|------|----------|
| Service Name | Protocol | Port | Priority |
| <input type="button" value="Add"/> | | | |

QoS MAC Control List

| | |
|------------------------------------|----------|
| MAC Address | Priority |
| <i>*MAC: ff:ff:ff:ff:ff:ff</i> | |
| <input type="button" value="Add"/> | |

QoS IP Control List

| | |
|------------------------------------|----------|
| IP Address | Priority |
| <input type="button" value="Add"/> | |

Apply**Cancel**

| QoS | | |
|-------------------------------------|--|---------|
| Item | Description | Default |
| Enable QoS | Click to enable "QoS" function. | Disable |
| Downlink Speed (kbps) | Prescribe downlink speed of router. Note: Default setting "0" means that there is no limitation of downlink speed. | 0 |
| uplink Speed (kbps) | Prescribe uplink speed of router. Note: Default setting "0" means that there is no limitation of uplink speed. | 0 |
| Optimize for TCP Flags | User can choose to enable TCP flags: "SYN", "ACK", "FIN", "RST", which means data with above TCP Flags will get the highest priority to occupy bandwidth. After enabled, router will enhance respond timeout of TCP control, in case that data resend frequently. | Disable |
| Optimize for ICMP | Enable to optimize for ICMP, which means ICMP will get the highest priority to occupy bandwidth. After enabled respond interval of PING control will be shorter. Note: if user click to enable "Optimize for TCP Flags", "Optimize for Serial Data Forwarding", and "Optimize for ICMP" at the same time (these three services are in the same priority level), router will automatically start Stochastic Fairness Queuing (SFQ) strategy to make a fair bandwidth allocation, in case of one service occupy all the bandwidth. | Disable |
| Optimize for Serial Data Forwarding | Enable to optimize for serial data forwarding, which means serial data forwarding will get the highest priority to occupy bandwidth. When enable serial data forwarding it need to enable local port number for controlling. Therefore, it needs to set local port number of router even if router is as TCP Client. | Disable |

| | | |
|---|--|--------|
| Default Percent Definition | <p>Select from “Exempt”, “Premium”, “Express”, “Normal” and “Bulk”. Users (Services) with no other pre-priority set will use this default priority.</p> <p>Exempt: this is the highest priority which guarantees that the minimum global rate of router is 50% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Premium: guarantees that the minimum global rate of router is 25% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Express: guarantees that the minimum global rate of router is 15% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Normal: guarantees that the minimum global rate of router is 10% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Bulk: guarantees that the minimum global rate of router is 1% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> | Normal |
| Default Priority | Select from “Exempt”, “Premium”, “Express”, “Normal” and “Bulk”. | Normal |
| Service Name @ QoS Service Control List | Set server name of the service that you want to set it with QoS Control. Router supports up to 20 users set with QoS Service Control. Priority of QoS Service Control is higher than that of both QoS IP control and QoS MAC control. | Null |
| Protocol @ QoS Service Control List | Select from “TCP”, “UDP” and “TCP&UDP”. | TCP |
| Port @ Service Control List | Enter the port number of the service that you want to set it with QoS Control. | Null |
| Priority @ QoS Service Control List | <p>Select from “Exempt”, “Premium”, “Express”, “Normal” and “Bulk”.</p> <p>Select the priority of the service that you want to set it with QoS Control.</p> <p>Exempt: this is the highest priority which guarantees that the minimum global rate of router is 50% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Premium: guarantees that the minimum global rate of router is 25% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Express: guarantees that the minimum global rate of router is 15% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Normal: guarantees that the minimum global rate of router is 10% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Bulk: guarantees that the minimum global rate of router is 1% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> | Exempt |
| MAC Address @ QoS MAC Control List | Enter MAC address of the user (for example, PC) who you want to set it with QoS Control. Router supports up to 20 users set with QoS MAC Control. Priority of QoS MAC Control is higher than that of QoS IP control. | Null |
| Priority @ QoS MAC Control List | <p>Select from “Exempt”, “Premium”, “Express”, “Normal” and “Bulk”.</p> <p>Select the priority of the user (for example, PC) who you want to set it with QoS Control.</p> <p>Exempt: this is the highest priority which guarantees that the minimum global</p> | Exempt |

|--|--|--------|
| | <p>rate of router is 50% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Premium: guarantees that the minimum global rate of router is 25% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Express: guarantees that the minimum global rate of router is 15% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Normal: guarantees that the minimum global rate of router is 10% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Bulk: guarantees that the minimum global rate of router is 1% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> | |
| IP Address @ QoS IP Control List | <p>Enter IP address of the user (for example, PC) who you want to set it with QoS Control. Router supports up to 20 users set with QoS IP Control. If want to control one network segment, user can set “IP Address” as format “x.x.x.x/24” or “x.x.x.x/255.255.255.0”. For example, if we to control network segment “172.16. x.x”, we can set “172.16.0.0/16” or “172.16.0.0/255.255.0.0” in “IP Address”.</p> | Null |
| Priority @ QoS IP Control List | <p>Select from “Exempt”, “Premium”, “Express”, “Normal” and “Bulk”.</p> <p>Select the priority of the user (for example, PC) who you want to set it with QoS Control.</p> <p>Exempt: this is the highest priority which guarantees that the minimum global rate of router is 50% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Premium: guarantees that the minimum global rate of router is 25% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Express: guarantees that the minimum global rate of router is 15% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Normal: guarantees that the minimum global rate of router is 10% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> <p>Bulk: guarantees that the minimum global rate of router is 1% of “Downlink Speed”, and the maximum rate can reach to 100% of “Downlink Speed”.</p> | Exempt |
| <p>Note: If services are in the same priority level, router will automatically start Stochastic Fairness Queueing (SFQ) strategy to make a fair bandwidth allocation.</p> | | |

3.18 Configuration > IP Routing

This section allows users to set the IP routing parameters.

Static Route
RIP
 OSPF

Static Route Table

| | | | |
|------------------------------------|-------------|---------|---------|
| Interface | Destination | NetMask | Gateway |
| <input type="button" value="Add"/> | | | |

| Static Route @ IP Routing | | |
|---------------------------|---|---------|
| Item | Description | Default |
| Static Route Table | Allow users to add, delete or modify static route rules manually. | Null |
| Interface | Select from "WAN", "LAN_0". | WAN |
| Destination | Enter the destination host's IP address or destination network. | Null |
| Netmask | Enter the Netmask of the destination or destination network. | Null |
| Gateway | Enter the gateway's IP address of this static route rule. Router will forward all the data which fit for the destination and Netmask to this gateway. | Null |

Static Route
 RIP
 OSPF

RIPIPv4 Enabled
☒ Enable RIP Protocol Setting

RIP Protocol Version
☒ RIPv1
 ☐ RIPv2

RIP Protocol common Settings

| | |
|-----------------|----------------------------------|
| Neighbor IP: | <input type="text"/> |
| Update time(s): | <input type="text" value="30"/> |
| Timeout(s): | <input type="text" value="180"/> |
| Garbage(s): | <input type="text" value="120"/> |

RIP protocol Advance Setting
☐ Enable Advance

Network List

| | |
|------------------------------------|---------|
| Network Address | NetMask |
| <input type="button" value="Add"/> | |

| RIP @ IP Routing | | |
|-----------------------------|--|---------|
| Item | Description | Default |
| RIP | RIP (Routing Information Protocol) is a distance-vector routing protocol, which employs the hop count as a routing metric. RIP prevents routing loops by implementing a limit on the number of hops allowed in a path from the source to a destination. | Null |
| Enable RIP Protocol Setting | Tick to enable RIP function. | Disable |
| RIP Protocol Version | Select from "RIPv1" and "RIPv2". | RIPv1 |
| Neighbor IP | If you input this neighbor IP, router will only send RIP request message to this IP instead of broadcast. This item only needs to be set in some unicast network. | 0.0.0.0 |
| Update times | Defines the interval between routing updates. | 30 |
| Timeout | Defines the route aging time. If no update for a route is received after the aging time elapses, the metric of the route is set to 16 in the routing table. | 180 |
| Garbage | Defines the interval from when the metric of a route becomes 16 to when it is deleted from the routing table. During the Garbage-Collect timer length, RIP advertises the route with the routing metric set to 16. If no update is announced for that route after the Garbage-Collect timer expires, the route will be deleted from the routing table. | 120 |
| Enable Advance | Tick to enable RIP protocol Advance Setting. | Disable |
| Default Metric | This value is used for redistributed routes. | 1 |
| Distance | The first criterion that a router uses to determine which routing protocol to use if two protocols provide route information for the same destination. | 120 |
| Passive | Select from "None", "Eth0", and "Default". This command sets the specified interface to passive mode. On passive mode interface, all receiving packets are processed as normal and Rip info does not send either multicast or unicast RIP packets except to RIP neighbors specified with neighbor command. The default is to be passive on all interfaces. | None |
| Enable Default Origination | Enable to make router send the default route to the other routers which in the same IGP AS. | Disable |
| Enable Redistribute Connect | Redistribute connected routes into the RIP tables. | Disable |
| Enable Redistribute Static | Redistributes routing information from static route entries into the RIP tables. | Disable |
| Enable Redistribute OSPF | Redistributes routing information from OSPF route entries into the RIP tables. | Disable |
| Network List | Router will only report the RIP information in this list to its neighbor. | Null |
| Network Address | Enter the Network address which Eth0 or Eth 1 connects directly. | Null |
| Netmask | Enter the Network's Netmask which Eth0 or Eth 1 connects directly. | Null |

Static Route

RIP

OSPF

OSPF Protocol

☐ Enable OSPFv2

OSPF @ IP Routing

| Item | Description | Default |
|---------------|--|---------|
| OSPF | OSPF (Open Shortest Path First) is a link-state routing protocol for IP networks. It uses a link state routing algorithm and falls into the group of interior routing protocols, operating within a single autonomous system (AS). | Null |
| Enable OSPFv2 | Tick to enable OSPF function. | Disable |

3.19 Configuration > DynDNS

This section allows users to set the DynDNS parameters.

DynDNS

DynDNS Settings

☒ Enable DynDNS

Service Type:

DynDNS-Dynamic ▼

Hostname:

Username:

Password:

Force Update

DynDNS Status: *DynDNS is initializing.....*

DynDNS

| Item | Description | Default |
|---------------|---|----------------|
| DynDNS | The Dynamic DNS function allows you to alias a dynamic IP address to a static domain name, allowing users whose ISP does not assign them a static IP address to use a domain name. This is especially useful for hosting servers via your connection, so that anyone wishing to connect to you may use your domain name, rather than having to use your dynamic IP address, which changes from time to time. This dynamic IP address is the WAN IP address of the router, which is assigned to you by your ISP. | Null |
| Enable DynDNS | Tick to enable DynDNS function. | Disable |
| Service Type | Select the DDNS service from "DynDNS-Dynamic", "QDNS (3322)", "NOIP" and "Custom" which you have established an account with. | DynDNS-Dynamic |
| Hostname | Enter the Host name the DDNS server provided. | Null |

| | | |
|---------------|--|------|
| Username | Enter the user name the DDNS server provided. | Null |
| Password | Enter the password the DDNS server provided. | Null |
| Force Update | Click to the update and use the DynDNS settings. | Null |
| DynDNS Status | Show current status of DynDNS | Null |

3.20 Configuration > DMVPN

| IPSec Tunnel @ IPSec | | |
|----------------------|--|---------|
| Item | Description | Default |
| Add | Click Add to add new IPSec Tunnel | Null |
| Enable | Enable IPSec Tunnel, the max tunnel account is 3 | Null |
| IPSec Gateway | Enter the address of remote side IPSec VPN server. | Null |

| | | |
|----------------------|--|---------|
| Address | | |
| IPSec Mode | Select from "Tunnel" and "Transport". Tunnel: Commonly used between gateways, or at an end-station to a gateway, the gateway acting as a proxy for the hosts behind it. Transport: Used between end-stations or between an end-station and a gateway, if the gateway is being treated as a host—for example, an encrypted Telnet session from a workstation to a router, in which the router is the actual destination. | Tunnel |
| IPSec Protocol | Select the security protocols from "ESP" and "AH". ESP: Uses the ESP protocol. AH: Uses the AH protocol. | ESP |
| Local Subnet | Enter IPSec Local Protected subnet's address. | 0.0.0.0 |
| Local Subnet Mask | Enter IPSec Local Protected subnet's mask. | 0.0.0.0 |
| Local ID Type | Select from "IP Address", "FQDN" and "User FQDN" for IKE negotiation. "Default" stands for "IP Address". IP Address: Uses an IP address as the ID in IKE negotiation. FQDN: Uses an FQDN type as the ID in IKE negotiation. If this option is selected, type a name without any at sign (@) for the local security gateway, e.g., test.robustel.com. User FQDN: Uses a user FQDN type as the ID in IKE negotiation. If this option is selected, type a name string with an sign "@" for the local security gateway, e.g., test@robustel.com. | Default |
| Remote Subnet | Enter IPSec Remote Protected subnet's address. | 0.0.0.0 |
| Remote Subnet Mask | Enter IPSec Remote Protected subnet's mask. | 0.0.0.0 |
| Remote ID Type | Select from "IP Address", "FQDN" and "User FQDN" for IKE negotiation. IP Address: Uses an IP address as the ID in IKE negotiation. FQDN: Uses an FQDN type as the ID in IKE negotiation. If this option is selected, type a name without any at sign (@) for the local security gateway, e.g., test.robustel.com. User FQDN: Uses a user FQDN type as the ID in IKE negotiation. If this option is selected, type a name string with a sign "@" for the local security gateway, e.g., test@robustel.com. | Default |
| Negotiation Mode | Select from "Main" and "aggressive" for the IKE negotiation mode in phase 1. If the IP address of one end of an IPSec tunnel is obtained dynamically, the IKE negotiation mode must be aggressive. In this case, SAs can be established as long as the username and password are correct. | Main |
| Encryption Algorithm | Select from "DES", "3DES", "AES128", "AES192" and "AES256" to be used in IKE negotiation. DES: Uses the DES algorithm in CBC mode and 56-bit key. 3DES: Uses the 3DES algorithm in CBC mode and 168-bit key. AES128: Uses the AES algorithm in CBC mode and 128-bit key. | 3DES |

| | | |
|---------------------------|--|-------------|
| | AES192: Uses the AES algorithm in CBC mode and 192-bit key. AES256: Uses the AES algorithm in CBC mode and 256-bit key. | |
| Authentication Algorithm | Select from "MD5" and "SHA1" to be used in IKE negotiation. MD5: Uses HMAC-SHA1. SHA1: Uses HMAC-MD5. | MD5 |
| DH Group | Select from "MODP768_1", "MODP1024_2" and "MODP1536_5" to be used in key negotiation phase 1. MODP768_1: Uses the 768-bit Diffie-Hellman group. MODP1024_2: Uses the 1024-bit Diffie-Hellman group. MODP1536_5: Uses the 1536-bit Diffie-Hellman group. | MODP1024_2 |
| Authentication | Select from "PSK", "CA", "XAUTH Init PSK" and "XAUTH Init CA" to be used in IKE negotiation. PSK: Pre-shared Key. CA: Certification Authority. XAUTH: Extended Authentication to AAA server. | PSK |
| Secrets | Enter the Pre-shared Key. | Null |
| Life Time @ IKE Parameter | Set the lifetime in IKE negotiation. Before an SA expires, IKE negotiates a new SA. As soon as the new SA is set up, it takes effect immediately and the old one will be cleared automatically when it expires. | 86400 |
| SA Algorithm | Select from "DES_MD5_96", "DES_SHA1_96", "3DES_MD5_96", "3DES_SHA1_96", "AES128_MD5_96", "AES128_SHA1_96", "AES192_MD5_96", "AES192_SHA1_96", "AES256_MD5_96" and "AES256_SHA1_96" when you select "ESP" in "Protocol"; Select from "AH_MD5_96" and "AH_SHA1_96" when you select "AH" in "Protocol"; Note: Higher security means more complex implementation and lower speed. DES is enough to meet general requirements. Use 3DES when high confidentiality and security are required. | 3DES_MD5_96 |
| PFS Group | Select from "PFS_NULL", "MODP768_1", "MODP1024_2" and "MODP1536_5". PFS_NULL: Disable PFS Group MODP768_1: Uses the 768-bit Diffie-Hellman group. MODP1024_2: Uses the 1024-bit Diffie-Hellman group. MODP1536_5: Uses the 1536-bit Diffie-Hellman group. | PFS_NULL |
| Life Time @ SA Parameter | Set the IPSec SA lifetime. Note: When negotiating to set up IPSec SAs, IKE uses the smaller one between the lifetime set locally and the lifetime proposed by the peer. | 28800 |
| DPD Time Interval | Set the interval after which DPD is triggered if no IPSec protected packets is received from the peer. DPD: Dead peer detection. DPD irregularly detects dead IKE peers. When the local end sends an IPSec packet, DPD checks the time the last IPSec packet was received from the peer. If the time exceeds the DPD | 180 |

| | | |
|-------------------------|--|---------|
| | interval, it sends a DPD hello to the peer. If the local end receives no DPD acknowledgment within the DPD packet retransmission interval, it retransmits the DPD hello. If the local end still receives no DPD acknowledgment after having made the maximum number of retransmission attempts, it considers the peer already dead, and clears the IKE SA and the IPSec SAs based on the IKE SA. | |
| DPD Timeout | Set the timeout of DPD packets. | 60 |
| Enable Compress | Tick to enable compressing the inner headers of IP packets. | Disable |
| Enable ICMP Detection | Click to enable ICMP detection. | Disable |
| ICMP Detection Server | Enter the IP address or domain name or remote server. Router will ping this address/domain name to check that if the current connectivity is active. | Null |
| ICMP Detection Local IP | Set the local IP address. | Null |
| ICMP Detection Interval | Set the ping interval time. | 30 |
| ICMP Detection Timeout | Set the ping timeout. | 5 |
| ICMP Detection Retries | If Router ping the preset address/domain name time out continuously for Max Retries time, it will try to re-establish the VPN tunnel. | 3 |

3.22 Configuration > RobustVPN

This section allows users to configure the settings of RobustVPN, which is based on a hosted web service designed to connect customer to their machines through Internet. The hosted acts as data transit platform and offer communication originated by the customers to their machines. It is intended to be used in the industrial M2M communication sector.

3.27 Configuration > Modbus over TCP

This section allows users to configure the Modbus over TCP. Modbus over TCP slave functions, the remote can access the R3000 Lite's internal registers through Modbus over TCP.

Modbus over TCP

| Modbus over TCP Setting | | |
|--|--------------------------------|--|
| <input checked="" type="checkbox"/> Enable Modbus over TCP | | |
| Slave ID: | <input type="text" value="0"/> | |
| port: | <input type="text" value="0"/> | |

| Modbus over TCP | | |
|------------------------|--|---------|
| Item | Description | Default |
| Enable Modbus over TCP | Click to enable Modbus over TCP. | Disable |
| Slave ID | Enter the slave ID. | Null |
| Port | Enter the port which used to forward data. | Null |

3.28 Configuration > Modbus Master

R3000 Lite router could be configured as a Modbus master, and will automatically poll the slave sides and report the collected data to specified server.

This section allows users to configure the Modbus Master.

Note: Before the slave device transmits the data via serial interface, you should select protocol as “Modbus Master” in Serial.

Server IP

Server Port

Add

| Modbus Master | | |
|------------------------|--|---------|
| Item | Description | Default |
| Reading Interval(s) | In this set of cycle, read Remote Channels one by one. The equipment begins the reading of the channels in the order they were created at the time of configuration. This way, it continues reading all the channels, respecting the time between commands, until it has read them all. Every time the reading interval is reached, it restarts the reading of all of the remote channels. If the reading of the channels takes longer that the configured reading interval, it should wait for all channels to be read before starting a new reading interval. | 30 |
| Attempts | The max times of instruction attempts. If a read instruction in Remote Channels failure to perform the read command in a row, when the times achieve Attempts, R3000 Lite identifies automatically this instruction is not read, and the skip this instruction next read cycle. Only when this state duration keep over 30 seconds, it will become a new readable, and then try to execute the command next read cycle. | 3 |
| Max Response Time (ms) | The response time of the maximum waiting to read instructions. When you perform a read command, this time is the response time of R3000 Lite waiting for the command. If it didn't get response from the | 500 |

| | | |
|----------------------------|---|------|
| | instructions after the Max Response Time, the instructions read timeout. | |
| Time Between Commands (ms) | The execution of the interval between each instruction. | 50 |
| Logging Type | Read the save site of Modbus's data. Only save when it can't upload to the server, upload the data after the upload channel recovering. Delete the data after finishing uploading. | Null |
| Send via Portal | Enable to send data via portal. | |
| Server IP | Set the server IP address of receive Modbus data. | Null |
| Server Port | Set the server port of receive Modbus data. | Null |

3.29 Configuration > Remote Channels

This section allows users to configure the remote channels.

Note: Only configure the Modbus Master parameters at first, it can configure Remote Channels, otherwise it's disabled.

Remote Channels

| Remote Channels | | | | | | |

3.33 Configuration > VRRP

This section allows users to set the VRRP parameters.

VRRP

VRRP Settings

☒ Enable VRRP

Group ID:

Priority:

Interval (s):

Virtual IP:

| VRRP | | |
|-------------|---|-------------|
| Item | Description | Default |
| Enable VRRP | Tick to enable VRRP protocol. VRRP (Virtual Router Redundancy Protocol) is an Internet protocol that provides a way to have one or more backup routers when using a statically configured router on a local area network (LAN). Using VRRP, a virtual IP address can be specified manually. | Disable |
| Group ID | Specify which VRRP group of this router belong to. | 1 |
| Priority | Enter the priority value from 1 to 255. The larger value has higher priority. | 100 |
| Interval | The interval that master router sends keepalive packets to backup routers. | 10 |
| Virtual IP | A virtual IP address is shared among the routers, with one designated as the master router and the others as backups. In case the master fails, the virtual IP address is mapped to a backup router's IP address. (This backup becomes the master router.) | 192.168.0.1 |

3.34 Configuration > AT over IP

This section allows users to set the AT over IP parameters.

| 9 | DTXD | | | R3000 Lite → Device |

4.1.1 Console Port

User can use the console port to manage the router via CLI commands.
Please check section Introductions for CLI.

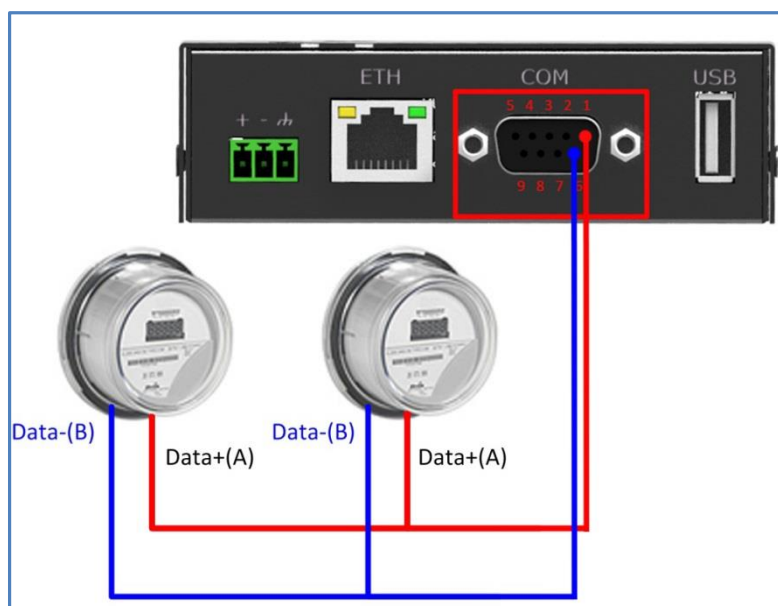

4.1.2 RS232

R3000 Lite supports one RS232 for serial data communication.
Please refer to the connection diagram at the right site.

4.1.3 RS485

R3000 Lite supports one RS485 for serial data communication.
Please refer to the connection diagram at the right site.

4.2 Cellular

4.2.1 Cellular Dial-Up

This section shows users how to configure the parameters of Cellular Dial-up within two configuration methods: “Always Online” and “Connect on Demand”.

1. Always Online

Configuration > Cellular WAN > Basic

| Cellular Settings | | |
|------------------------|-----------------------------|-----------------------------|
| Status: | SIM1 Not inserted | SIM2 Not inserted |
| Network Provider Type: | Custom ▾ | Custom ▾ |
| APN: | <input type="text"/> | <input type="text"/> |
| Username: | <input type="text"/> | <input type="text"/> |
| Password: | <input type="text"/> | <input type="text"/> |
| Dialup No.: | *99***1# | *99***1# |
| PIN Type: | None ▾ | None ▾ |

| Connection Mode | |
|---|--------------------------------------|
| Connection Mode: | Always Online ▾ |
| Redial Interval (s): | <input type="text" value="30"/> |
| Max Retries: | <input type="text" value="3"/> |
| ICMP Detection Primary Server: | <input type="text" value="8.8.8.8"/> |
| ICMP Detection Secondary Server: | <input type="text" value="8.8.4.4"/> |
| ICMP Detection Interval (s): | <input type="text" value="30"/> |
| ICMP Detection Timeout (s): | <input type="text" value="3"/> |
| ICMP Detection Retries: | <input type="text" value="3"/> |
| <input checked="" type="checkbox"/> Reset The Interface | |

| Dual SIM Policy | |
|---|--------|
| Main SIM Card: | SIM1 ▾ |
| <input checked="" type="checkbox"/> Switch To Backup SIM Card When Connection Fails | |
| <input type="checkbox"/> Switch To Backup SIM Card When ICMP Detection Fails | |
| <input type="checkbox"/> Switch To Backup SIM Card When Roaming Is Detected | |
| <input type="checkbox"/> Switch To Backup SIM Card When Data Limit Is Exceeded | |
| <input type="checkbox"/> Switch Back Main SIM Card After Timeout | |

The modifications will take effect after click “Apply” button.

If a customized SIM card is using, please select “Custom” instead of “Auto” in “Network Provider Type”, and some relative settings should be filled in manually.

2. Connect on Demand

Add

Select the trigger policy you need.

Note: If you select multiple trigger policies, the router will be triggered under anyone of them.

4.2.2 SMS Remote Status Reading

R3000 Lite supports remote control via SMS. Users can use following commands to get the status of R3000 Lite, cannot set new parameters of R3000 Lite at present.

An SMS command has following structure:

Password:cmd1,a,b,c;cmd2,d,e,f;cmd3,g,h,i;...;cmdn,j,k,n

SMS command Explanation:

1. Password: SMS control password is configured at **Basic->SMS Control->Password**, which is an optional parameter.
 - a) When there is no password, SMS command has following structure: **cmd1;cmd2;cmd3;...;cmdn**
 - b) When there is a password, SMS command has following structure: **Password:cmd1;cmd2;cmd3;...;cmdn**
2. cmd1, cmd2, cmd3 to Cmdn, which are command identification number 0001 – 0010.
3. a, b, c to n, which are command parameters.
4. The semicolon character (;) is used to separate more than one commands packed in a single SMS.
5. E.g., 1234:0001

In this command, password is 1234, 0001 is the command to reset R3000 Lite.

| Cmd | Description | Syntax | Comments |
|-------------------------|----------------------------------|--------------------|--|
| Control Commands | | | |
| 0001 | Reset device | cmd | if no passwd, please use command "cmd", or use command" passwd:cmd" cmd1 + cmd2: cmd1;cmd2 * - means can be null |
| 0002 | Save parameters | cmd | |
| 0003 | Save parameters | cmd | |
| 0004 | Start PPP dialup | cmd | |
| 0005 | Stop PPP | cmd | |
| 0006 | Switch SIM card | cmd | |
| 0007 | Enable/disable event counter | cmd, channel, flag | channel: 1 - DI_1 2 - DI_2 flag: 0 - disable 1 - enable |
| 0008 | Get event count value | cmd, channel | channel: 1 - DI_1 2 - DI_2 |
| 0009 | Clear event count | cmd, channel | channel: 1 - DI_1 2 - DI_2 |
| 0010 | Clear SIM card's data limitation | cmd, simNumber | simNumber: 1 - SIM_1 |

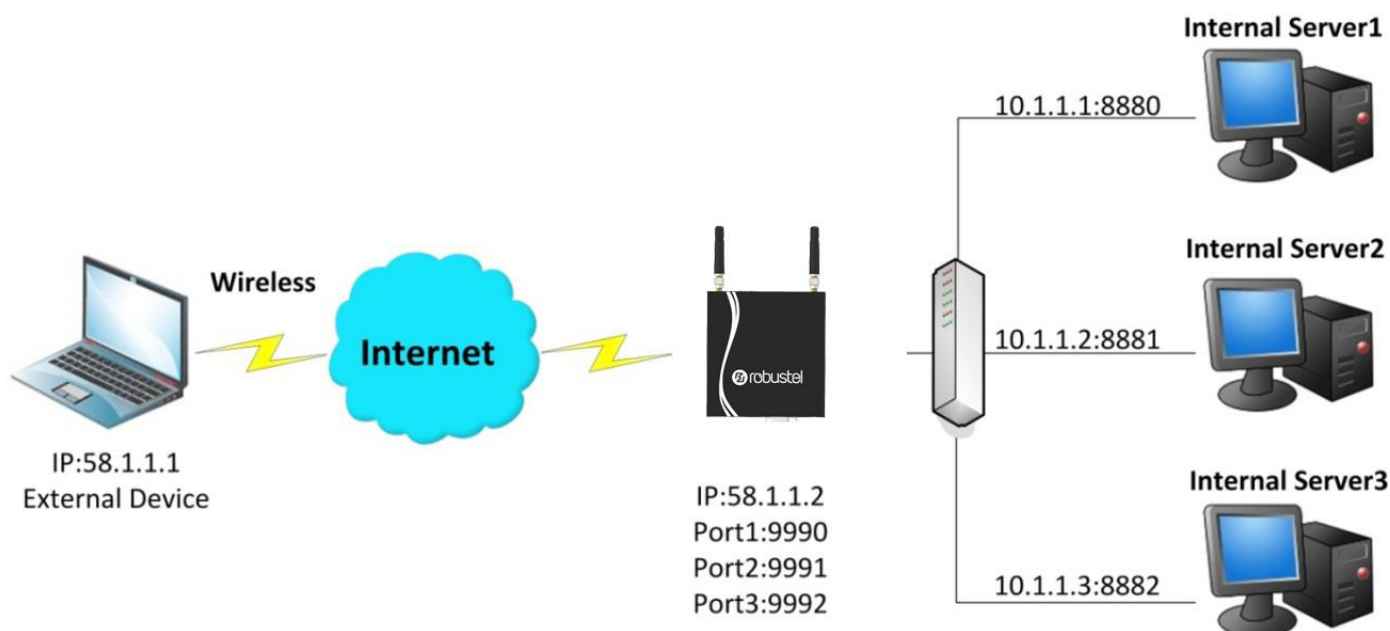

| | | | |
|---------------------|---|--|--|
| | | | 2 - SIM_2 |
| 0011 | Get system status | cmd | |
| 0012 | Upload and download ftp xml | cmd, function Number, server, address | functionNumber: 1 - upload datalog.log 2 - download config.xml |
| Set Commands | | | |
| 1000 | Set SIM card (APN, username, passwd) | cmd, simNumber, APN, username, passwd | simNumber: 1 - SIM_1 2 - SIM_2 |
| 1001 | Start Rlink | cmd, server address, port | |
| 1002 | Start RVPN | cmd, server address, port, username, password | |

4.3 Network

4.3.1 NAT

This section shows users how to set the NAT configuration of router.

Parameter Remote IP defines if access is allowed to route to the Forwarded IP and Port via WAN IP and “Arrives At Port”.

Configuration > NAT/DMZ > Port Forwarding

Port Forwarding

| Remote IP | Arrives At Port | Is Forwarded to IP Address | Is Forwarded to Port | Protocol | |
|-----------|-----------------|----------------------------|----------------------|----------|---|
| 58.1.1.1 | 9990 | 10.1.1.1 | 8880 | TCP | X |
| 58.1.1.1 | 9991 | 10.1.1.2 | 8881 | UDP | X |
| 58.1.1.1 | 9992 | 10.1.1.3 | 8882 | TCP&UDP | X |

*Remote IP: 1.1.1.1, 1.1.1.0/24, 1.1.1.1-2.2.2.2, 0.0.0.0 means any

*Arrives At Port: <1-65536> or <1-65536>-<1-65536>

Add

Explanations for above diagram:

If there are two IP addresses 58.1.1.1 and 59.1.1.1 for the External Devices, that the result will be different from the test when the NAT is working at R3000.

| | |
|--|---------|
| 58.1.1.1-----access to----->58.1.1.2:9990-----be forwarded to----->10.1.1.1:8000 | TCP |
| 58.1.1.1-----access to----->58.1.1.2:9991-----be forwarded to----->10.1.1.2:8001 | UDP |
| 58.1.1.1-----access to----->58.1.1.2:9992-----be forwarded to----->10.1.1.3:8002 | TCP&UDP |

4.3.2 L2TP

L2TP_SERVER:

| DPD Time Interval (s): | 180 |
| DPD Timeout (s): | 60 |
| IPsec Advanced | |
| VPN Over IPsec Type: | NONE |
| <input type="checkbox"/> Enable Compress | |

The modification will take effect after **Apply > Save > Reboot**.

4.3.5 OPENVPN

Note: The following diagrams with red color numbers mean these are the matches between server and client, and with the blue color number means it must be set locally for the tunnel.

OPENVPN_SERVER:

Configuration > OpenVPN > Server

| |
|--|
| Enable OpenVPN Server |
| <input type="checkbox"/> Enable OpenVPN Server |

Tick "Enable OpenVPN Server".

VPN Server Tunnel

| | | |
|--|-----------------------------------|-----------|
| Tunnel name: | OpenVPN_Tunnel_0 | |
| Listen IP: | | |
| Protocol: | UDP | 1 |
| Port: | 1194 | 2 |
| Interface: | tun | 3 |
| Authentication: | None | 4 |
| Local IP: | 10.8.0.1 | 5 |
| Remote IP: | 10.8.0.2 | 6 |
| <input checked="" type="checkbox"/> Enable NAT | | 7 |
| Ping Interval: | 20 | |
| Ping-Restart: | 120 | |
| Compression: | LZO | 8 |
| Encryption: | BF-CBC | 9 |
| MTU: | 1500 | 10 |
| Max Frame Size: | 1500 | 11 |
| Verbose Level: | ERR | |
| Expert Options: | --route 192.168.1.0 255.255.255.0 | |

**--xx xx.parameter, eg: --config xx.config*

Client Manage

| Use | Common Name | Password | Client IP | Local Static Route | Remote Static Route | |
|-----|-------------|----------|-----------|--------------------|---------------------|------------|
| | | | | | | Add |

**Static Route: <1.1.1.0/24> or <1.1.1.0/24;2.2.2.2/16>*

The modifications will take effect after click **Apply > Save > Reboot**.

OPENVPN_CLIENT:**Configuration > OpenVPN > Client****Enable OpenVPN Client1**

☐ Enable OpenVPN Client1

Tick "Enable OpenVPN Client1", and fill in the blank textbox

Enable OpenVPN Client X

☒ Enable
 ☐ Disable

Tunnel name:

Protocol: 1

Server Address:

Port: 2

Interface: 3

Authentication: 4

Local IP: 6

Remote IP: 5

☒ Enable NAT 7

Ping Interval:

Ping-Restart:

Compression: 8

Encryption: 9

MTU: 10

Max Frame Size: 11

Verbose Level:

Expert Options:

*--xx xx.parameter, eg: --config xx.config

The modification will take effect after **Apply > Save > Reboot**.

Chapter 5 Introductions for CLI

5.1 What's CLI and Hierarchy Level Mode

The R3000 Lite command-line interface (CLI) is a software interface providing another way to set the parameters of equipment from the console or through a telnet network connection. There are four different CLI hierarchy level modes which have different access rights:

- User exec mode—The command prompt “>” shows you are in the user mode , in this mode user can only use some simple commands to see the current configuration and the status of the device, or enter the “ping” command to troubleshoot the network connectivity.
- Privileged exec mode—When you enter Privileged mode ,the prompt will change to “#” which user can do not only what is allowed in the user exec mode but also the new additions like importing and exporting for files , system log , debug and so on .
- Global configuration mode—The global configuration mode with prompt “<config>#” allows user to add, set,modify and delete current configuration .
- Interface mode—Prompt “<config-xx>” means in this mode we can set both IP address and mtu for this interface.

Following is the relationship diagram about how to access or quit among the different modes:

USER EXEC MODE:

R3000 Configure Environment

Username: admin

Password: *****

| | |
|----------|--|
| R3000> ? | //check what commands can be used in user exec mode |
| enable | Turn on privileged commands |
| exit | Exit from current mode |
| ping | Ping test |
| reload | Halt and perform a cold restart |
| telnet | Startup a telnet client shell |
| tracert | Tracert test |
| show | Show running system information |

PRIVILEGED EXEC MODE:

R3000> enable

Password: ***** //type "admin"

R3000# ? //check what commands can be used in **Privileged exec mode**

| | |
|-----------|---------------------------------|
| debug | Debug configure information |
| enable | Turn on privileged commands |
| exit | Exit from current mode |
| export | Export file using tftp |
| syslog | Export system log |
| import | Import file using tftp |
| load | Load configure information |
| ping | Ping test |
| reload | Halt and perform a cold restart |
| telnet | Startup a telnet client shell |
| module-at | module at test |
| sniffer | catch network traffic |
| tracert | Tracert test |
| write | Write running configuration |
| wpadebug | set wpa_supPLICANT debug level |
| tracert | Tracert test |
| write | Write running configuration |
| tftp | Copy from tftp: file system |
| show | Show running system information |
| configure | Enter configuration mode |
| end | Exit to Normal mode |

GLOBAL CONFIGURATION MODE:

R3000# configure

R3000(config)# ? //check what commands can be used in **global configuration mode**

| | |
|-----------|-------------------------------|
| exit | Exit from current mode |
| end | Exit to Normal mode |
| interface | Configure an interface |
| set | Set system parameters |
| add | Add system parameters list |
| modify | Modify system parameters list |
| delete | Delete system parameters list |

INTERFACE MODE:

```
R3000(config)# interface Ethernet 0
```

```
R3000(config-e0)# ?           //check what commands can be used in interface mode
```

```
exit           Exit from current mode
end            Exit to Normal mode
ip             Set the IP address of an interface
mtu            Set the IP address of an interface
```

5.2 How to Configure the CLI

Following is a list about the description of help and the error should be encountered in the configuring program.

| Commands /tips | Description |
|--|--|
| ? | Typing a question mark “?” will show you the help information. |
| Ctrl+c | Press these two keys at the same time, except its “copy” function but also can be used for “break” out of the setting program. |
| Invalid command “xxx” | Parameters “xxx” are not supported by the system, in this case, enter a mark “?” instead of “xxx” will help to find out the correct parameters about this issue. |
| Incomplete command | Command is not incomplete. |
| % Invalid input detected at '^' marker | '^' marker indicates the location where the error is. |

Note: Most of the parameters setting are in the **Global configuration mode**. Commands **set**, **add** are very important for this mode. If some parameters can't be found in the Global configuration mode, please move back to **Privileged exec mode** or move up to **Interface mode**.

Note: Knowing the **CLI hierarchy level modes** is necessary before configuring the CLI. If not, please go back and read it quickly in chapter 5.

Quick Start with Configuration Examples

The best and quickest way to master CLI is firstly to view all features from the webpage and then reading all CLI commands at a time, finally learn to configure it with some reference examples .

Example 1: Show current version

```
R3000> show version
```

```
software version : 1.01.01-sub-131211 Dec 11 2013 18:58:20
kernel version   : v2.6.39-5 PREEMPT Mon Dec 9 09:49:58 HKT 2013
hardware version : 1.00.03
```

Example 2: Update firmware via tftp

```
R3000> enable
```

```
Password: *****
```

```
R3000#
R3000# tftp 172.16.3.3 get rootfs R3k.1.01.01-sub-131211.01.fs

Tftp transferring
tftp succeeded!downloaded
R3000# write                                     //save current configuration
Building configuration...
OK
R3000#reload
!Reboot the system?'yes'or 'no':yes                //reload to take effect
```

Example 3: Set IP address for Eth0

```
R3000> enable
Password: *****
R3000 # configure
R3000 (config) # set eth0
ethernet interface type: LAN
->IP address [192.168.0.1]:172.16.1.231           //set IP address for eth0
->Netmask [255.255.255.0]:255.255.0.0
->mtu value (1024-1500)[1500]:

this parameter will be take effect when reboot!
really want to modify[yes]:
R3000 (config) # end
R3000# write                                     //save current configuration
Building configuration...
OK
R3000 # reload
! Reboot the system? 'yes' or 'no': yes            //reload to take effect
```

Example 4: CLI for Cellular dialup

```
R3000> enable
Password: *****
R3000# configure
R3000 (config) # set cellular
  1. set SIM_1 parameters
  2. set SIM_2 parameters
->please select mode (1-2)[1]:
SIM 1 parameters:
network provider
  1. Auto
```

```
2. Custom
3. china-mobile
->please select mode(1-3)[1]:
->dial out using numbers[]:
PIN mode:
1. input only
2. PIN locked
3. PIN unlocked
->please select mode(1-3)[1]:
->pin code[]:
->PUK[]:
connection Mode:
1. Always online
2. Connect on demand
->please select mode(1-2)[1]:
->redial interval(1-120)[30]:
->max connect try(1-60)[3]:
->ICMP detection primary server[8.8.8.8]:
->ICMP detection second server[8.8.4.4]:
->ICMP detection interval(1-1800)[30]:
->ICMP detection timeout(1-10)[3]:
->ICMP detection retries(1-20)[3]:
->reset the interface?'yes'or'no'[yes]:
main SIM select:
1. Auto
2. SIM_1
3. SIM_2
->please select mode(1-3)[2]:
->when connect fail?'yes'or'no'[yes]:
->when ICMP Detection fails fails?'yes'or'no'[no]:
->when roaming is detected?'yes'or'no'[no]:
->month date limitation?'yes'or'no'[no]:
->Call back Main SIM card after timeout?'yes'or'no'[no]:
->show advanced options?'yes'or'no'[no]:
```

this parameter will be take effect when reboot!

really want to modify[yes]:R3000(config)# end

R3000# write

//save current configuration

Building configuration...

OK

R3000# show cellular

Cellular enable : yes

1. show SIM_1 parameters

2. show SIM_2 parameters

->please select mode(1-2)[1]:

SIM 1 parameters:

```

network provider           : Auto
dial numbers               :
pin code                   : NULL
connection Mode            : Always online
redial interval            : 30 seconds
max connect try            : 3
ICMP primary server        : 8.8.8.8
ICMP second server         : 8.8.4.4
ICMP detection interval    : 30 seconds
ICMP detection timeout     : 3 seconds
ICMP detection retries     : 3
reset the interface        : yes
main SIM select            : SIM_1
when connect fail          : yes
when roaming is detected   : no
month date limitation      : no
SIM phone number           :
network select Type        : Auto
authentication type        : AUTO
mtu value                  : 1500
mru value                  : 1500
asynmap value              : 0xffffffff
use peer DNS               : yes
primary DNS                : 0.0.0.0
secondary DNS              : 0.0.0.0
address/control compressio: yes
protocol field compression: yes
expert options             : noccn nobsdcomp

```

R3000# reload

!Reboot the system ?'yes'or 'no':yes //reload to take effect

5.3 Commands Reference

| Commands | Syntax | Description |
|----------|--------------------------|------------------------------------|
| Debug | Debug <i>parameters</i> | Turn on or turn off debug function |
| Export | Export <i>parameters</i> | Export vpn ca certificates |
| Import | Import <i>parameters</i> | Import vpn ca certificates |

| | | |
|--------|--|---|
| Syslog | syslog | Export log information to tftp server |
| Load | Load default | Restores default values |
| Write | Write | Save current configuration parameters |
| tftp | Tftp <i>IP-address</i> get { <i>cfg rootfs</i> } <i>file-name</i> | Import configuration file or update firmware via tftp |
| Show | Show <i>parameters</i> | Show current configuration of each function , if we need to see all please using “show running ” |
| Set | Set <i>parameters</i> | All the function parameters are set by commands set and add, the difference is that set is for the single parameter and add is for the list parameter |
| Add | Add <i>parameters</i> | |

Glossary

| Abbreviations | Description |
|---------------|--|
| AC | Alternating Current |
| APN | Access Point Name of GPRS Service Provider Network |
| ASCII | American Standard Code for Information Interchange |
| CE | Conformité Européene (European Conformity) |
| CHAP | Challenge Handshake Authentication Protocol |
| CLI | Command Line Interface for batch scripting |
| CSD | Circuit Switched Data |
| CTS | Clear to Send |
| dB | Decibel |
| dBi | Decibel Relative to an Isotropic radiator |
| DC | Direct Current |
| DCD | Data Carrier Detect |
| DCE | Data Communication Equipment (typically modems) |
| DCS 1800 | Digital Cellular System, also referred to as PCN |
| DI | Digital Input |
| DO | Digital Output |
| DSR | Data Set Ready |
| DTE | Data Terminal Equipment |
| DTMF | Dual Tone Multi-frequency |
| DTR | Data Terminal Ready |
| EDGE | Enhanced Data rates for Global Evolution of GSM and IS-136 |
| EMC | Electromagnetic Compatibility |
| EMI | Electro-Magnetic Interference |
| ESD | Electrostatic Discharges |
| ETSI | European Telecommunications Standards Institute |
| EVDO | Evolution-Data Optimized |
| FDD LTE | Frequency Division Duplexing Long Term Evolution |
| GND | Ground |
| GPRS | General Packet Radio Service |
| GRE | generic route encapsulation |
| GSM | Global System for Mobile Communications |
| HSPA | High Speed Packet Access |
| ID | identification data |
| IMEI | International Mobile Equipment Identification |
| IP | Internet Protocol |
| IPSec | Internet Protocol Security |

| | |
|-------------|---|
| kpbs | kbits per second |
| L2TP | Layer 2 Tunneling Protocol |
| LAN | local area network |
| LED | Light Emitting Diode |
| M2M | Machine to Machine |
| MAX | Maximum |
| Min | Minimum |
| MO | Mobile Originated |
| MS | Mobile Station |
| MT | Mobile Terminated |
| OpenVPN | Open Virtual Private Network |
| PAP | Password Authentication Protocol |
| PC | Personal Computer |
| PCN | Personal Communications Network, also referred to as DCS 1800 |
| PCS | Personal Communication System, also referred to as GSM 1900 |
| PDU | Protocol Data Unit |
| PIN | Personal Identity Number |
| PLCs | Program Logic Control System |
| PPP | Point-to-point Protocol |
| PPTP | Point to Point Tunneling Protocol |
| PSU | Power Supply Unit |
| PUK | Personal Unblocking Key |
| R&TTE | Radio and Telecommunication Terminal Equipment |
| RF | Radio Frequency |
| RTC | Real Time Clock |
| RTS | Request to Send |
| RTU | Remote Terminal Unit |
| Rx | Receive Direction |
| SDK | Software Development Kit |
| SIM | subscriber identification module |
| SMA antenna | Stubby antenna or Magnet antenna |
| SMS | Short Message Service |
| SNMP | Simple Network Management Protocol |
| TCP/IP | Transmission Control Protocol / Internet Protocol |
| TE | Terminal Equipment, also referred to as DTE |
| Tx | Transmit Direction |
| UART | Universal Asynchronous Receiver-transmitter |
| UMTS | Universal Mobile Telecommunications System |
| USB | Universal Serial Bus |
| USSD | Unstructured Supplementary Service Data |
| VDC | Volts Direct current |

| | |
|------|-------------------------------|
| VLAN | Virtual Local Area Network |
| VPN | Virtual Private Network |
| VSWR | Voltage Stationary Wave Ratio |
| WAN | Wide Area Network |
